**Subject: Suppliers of Compact Laminate Material suitable for use in  
Queensland State Schools**

As part of the development of Design Guidelines for school facilities, Education Queensland has developed performance standards for bench top materials for use in kitchens, science laboratories, visual art studios and other typically wet activity areas in schools. As a result, the use of compact laminate for these bench tops has been supported.

Various suppliers of compact laminate have approached Education Queensland with a view to using their products in school projects. In all cases, technical data pertaining to the product has been requested and reviewed in order to deem its suitability for the intended purpose in school projects.

As a result, Education Queensland has endorsed compact laminate materials stocked by the following suppliers:

- \* Abet Laminati
- \* Duropal (Design Compact Solutions)
- \* Laminex Industries (13mm Multipurpose, 13mm XR, 16mm Laboratory)
- \* Lamicolor (Laminate Innovations)
- \* L K International (Polyrey Compact)

Where appropriate, Compact Laminate surfaces are detailed in the Room Data Sheets and Design Guidelines for School Facilities.

It should be noted that this advice is for SUPPLIERS of Compact Laminate product ONLY, and is not intended to influence the selection of Fabricators/Joiners.
